MEMORANDUM FOR: Chairman, Interagency Intelligence Advisory  
Group on Exchanges

SUBJECT: Proposed Exchanges Under the US-USSR  
Environmental Cooperation Agreement

1. The 14 proposed exchanges disseminated for comment by the Council on Environmental Quality (CEQ) indicate little potential for US technological gain. But they do open a possible market for the sale of US technology to the USSR. The few areas where the US could most likely gain some technology are cloud physics, micrometeorology as it relates to air pollution, permafrost and tundra studies, and wildlife conservation.

2. It appears that the CEQ could use some help in arranging these exchanges to the maximum possible benefit of the US. OSI will be glad to provide any intelligence
